

GitHub Project 1 Business or Personal Website Summary

Project Overview

This repository contains a front-end web development project titled "Pizza Palace", created as part of a Software Engineering course. The project simulates a professional landing page for a fictional pizza restaurant, focusing on clear messaging and user experience. It applies core software engineering principles within a front-end development context.

Project Structure

The repository includes the following key components:

- HTML Files: index.html, order.html, and customize.html form the main pages of the website.
- CSS: Located in the css/ directories, these files handle styling.
- Assets: Images are stored in the images/ folder to support the visual aspects of the site.

Documentation: Includes wireframes, user stories (Project 1 User Stories.docx)

Key Features

- Responsive Design: Ensures usability across various devices.
- User-Centric Layout: Prioritizes user experience with intuitive navigation and clear calls to action.
- Modular Codebase: Organized structure for maintainability and scalability.

Documentation: Comprehensive supporting materials for understanding the project's development process.
